

Waitsfield Ancient Roads Project  
Road ID 2

This is a cross road that connect current TH16 to current TH 10. A survey record from 103 (See CCGIS record 23) is most likely the survey record associated with this road as determined by my research and the research of surveyor Glenn Towne. This road is clearly observable on the ground with distance starting and ending points as well as being flanked on either side by stone walls (a widely accepted sign of a former road). This cross road appears on all town maps up until the first mileage map of the town, though there is no associated discontinuance record that could be found.
